# AWS EKS + JENKINS + KUBERNETES DEPLOYMENT PROJECT

## Project Overview

This project demonstrates deploying a containerized application on AWS EKS using Jenkins.

The workflow includes:

- Creating Kubernetes cluster using EKS
- Building Docker image
- Pushing image to Docker Hub
- Deploying application to Kubernetes
- Managing deployment using Jenkins pipeline

# AWS EKS + JENKINS + KUBERNETES DEPLOYMENT PROJECT

## Architecture / Workflow

1. Developer pushes code to GitHub
2. Jenkins pulls the code
3. Jenkins builds Docker image
4. Image is pushed to Docker Hub
5. Jenkins deploys application to EKS
6. Kubernetes runs the application
7. MongoDB stores application data

# AWS EKS + JENKINS + KUBERNETES DEPLOYMENT PROJECT

## Tools Used

- AWS EKS
- Jenkins
- Docker
- Kubernetes
- kubectl
- eksctl
- AWS CLI

# AWS EKS + JENKINS + KUBERNETES DEPLOYMENT PROJECT

## Output Screenshots

- EKS cluster creation
- Jenkins pipeline success
- Docker image pushed
- Kubernetes pods running
- Application UI
- MongoDB data
